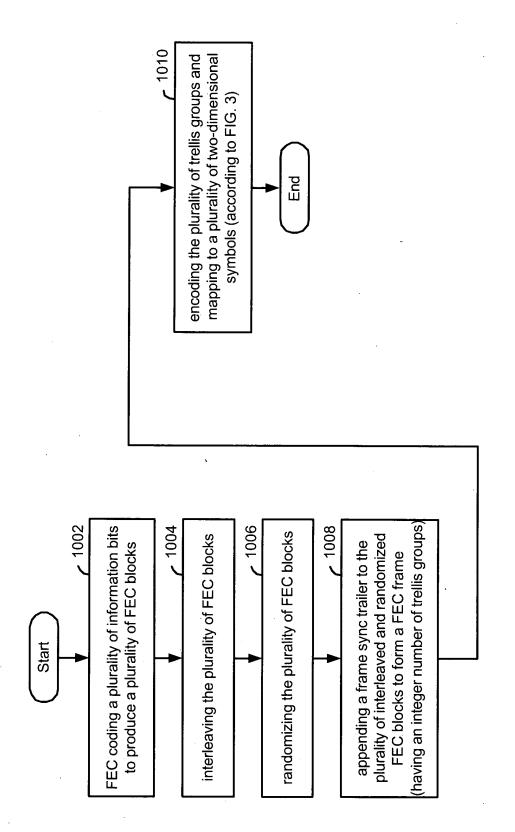

FIG. 10

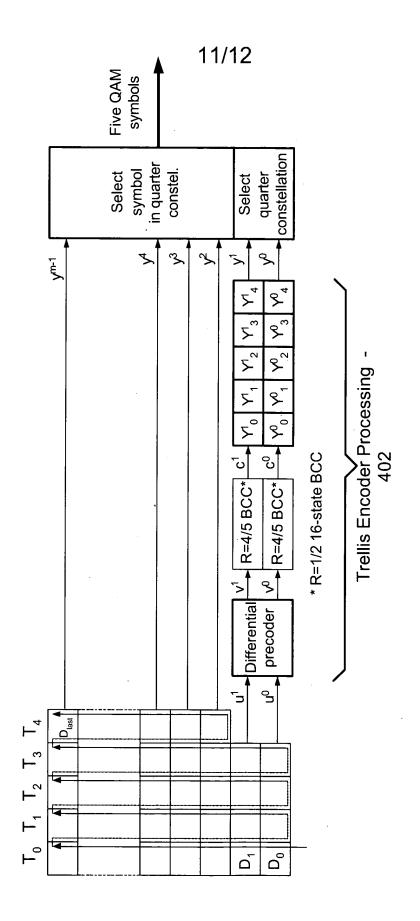

FIG. 11

FEC frame = sequence of 33-, 38-, 43-, or 48-bit trellis groups (TGs)

128QAM RS block #1 RS block #2 —

----- RS block #77 44-bit FST

FST='71E8 4D D4 w0 0' $_{hex}$  inserted as last 44 (u1,u0)-bits in FEC frame)

 $77 \times 128 \times 7 + 44 = 69036 \text{ bits} = 2092 \times 33 \text{-bit TGs}$ 

256QAM (J.83B)

RS block #1 RS block #2 ----- RS block #88 40-bit FST

FST='71E8 4D D4 w0'<sub>hex</sub> inserted as last 40 (u¹,u⁰)-bits in FEC frame)

 $88 \times 128 \times 7 + 40 = 78888$  bits = 2076 x 38-bit TGs

512QAM

RS block #1 RS block #2 ----- RS block #99 48-bit FST

 $99 \times 128 \times 7 + 48 = 69036 \text{ bits} = 2064 \times 43 \text{-bit TGs}$ 

FST='71E8 4D D4 w0 00'  $_{\text{hex}}$  inserted as last 48 (u<sup>1</sup>,u<sup>0</sup>)-bits in FEC frame)

1024QAM

RS block #1 | RS block #2 | ----- | RS block #111 | 48-bit FST

48-bit FST FST='71E8 4D D4 w0 00' hex inserted as last 48 (u¹,u⁰)-bits in FEC frame)

 $111 \times 128 \times 7 + 48 = 99504 \text{ bits} = 2073 \times 48 - \text{bit TGs}$ 

FEC frames contain integer numbers of TGs

w = 4-bit control word indicating the size of the employed interleaver
